

# Advanced Image Manipulation

## MIDTERM PRESENTATIONS

10 points | due week five

**partner's name:**

**partner's contact info:**

With a partner, prepare a 15 minute lecture teaching the class how to create something in Photoshop. (not a Powerpoint presentation)

This mini-lesson should cover something unique: a time-saving idea, an interesting tip or other material that you have discovered or invented.

Create a **handout** to accompany your lesson and provide any relevant demo files so the class can follow along. This handout needs to be photocopied for everyone in the class (26), so design accordingly.

The handout must include a **bibliography** of the source(s) of your tutorial.

Provide a version of the finished file and possibly applications for it, to show what the goal of the tutorial is.

Explain why you are doing each of the steps, don't just read off the handout.

The midterm will be graded on the quality of the handout (including bibliography), the preparedness of the presentation (organization, volume, pacing, clarity and teamwork) and the difficulty of the exercise.

*you are responsible for making copies of your handout for the class  
(this does not mean printing copies in the lab during other's presentations)*

*practice your presentation ahead of time*
