

Advanced Image Manipulation: Custom Brushes

Open the Brushes Palette to customize a brush. Brushes can also be found online and can be saved and shared.

Brush Tip Shape allows you to create a custom brush by adjusting the size, angle, hardness & spacing.

Shape Dynamics adjusts the specifics of how the paint is applied.

Size Jitter controls the smoothness of the edge of the stroke

Minimum Diameter controls the tip of the line (to create calligraphic line)

Texture paints over a selected texture to add depth to the brushstroke.

Dual Brush allows you to use two brushes simultaneously.

Color Dynamics blends colors together.

Foreground/Background Jitter alternates between foreground and background colors

Hue Jitter applies multiple hues in each stroke

Saturation Jitter applies multiple saturations of the foreground color

Brightness Jitter controls the brightness of the paint

Purity controls the saturation of the paint

Airbrush applies paint over time (the longer you hold the mouse, the more opaque the paint becomes).

] and **[** increase and decrease brush size
shift +] and **shift + [** increase and decrease brush softness
x switches foreground and background colors
shift creates a straight line

Save a custom brush or pattern by creating a shape and selecting **edit-define brush preset** (loads in brushes) or **edit-define pattern** (loads in paint bucket).
